

ALERTSENSE

ONEIDA COUNTY'S NEW REVERSE 911 & EMERGENCY ALERTING SYSTEM

Oneida County is pleased to announce the release of a new mobile app, **MyAlerts**, powered by **AlertSense**, the county's new emergency alerting service. Residents and visitors alike can now receive life-saving emergency alerts and advanced warnings of severe weather directly on their Android, Apple iOS phones, or tablets. You can download the free **MyAlerts** app today from the Google Play Store or the App Store.

You may also sign up to receive alerts and notifications for severe weather, and public safety, without downloading an app. This will allow you to receive voice calls, text messages and emails by visiting the following link: <http://bit.ly/OCSOAlerts>

You can also scan the QR Code to be taken to the sign-up website:

Types of Alerts You Can Choose to Receive through the web URL or App:

Severe Weather Alerts

Receive advanced warning of severe weather when you or one of your locations is in the direct path of the storm. **AlertSense** receives feeds from the National Weather Service, automatically interprets the geographic area affected, and delivers targeted alerts immediately to app users when one of their locations falls within the impact area. You can tailor your alert settings by location, selecting the severity level for which you want to receive notifications. For example, you can choose to receive only the most severe weather warnings or all watches and advisories as well.

Public Safety Alerts

Receive emergency alerts from public safety alerting authorities, notifying you of situations that threaten the safety of yourself or those you care about. Public safety alerts include events such as crime, active shooter, imminent danger, hazardous materials, wildfire, floods, and the need for immediate evacuation.

Community Notifications

You can also choose to receive notifications of events in your community that, while not life-threatening emergencies, still impact your daily life and commute, such as road closures and power outages.

My Locations

Simply add all the locations that matter to you, both within the county and even in other parts of the country. For example, you could identify your home, your child's school, where your aging parent resides, the university where your older child attends, and your office. When you travel, you can enable the app to "monitor my current location" to receive any emergency alerts issued for the city or area you are visiting.
